1 Main Idea

Abstract

This Project is about delivering free books, such as pdfdrive where you can find free educational or spiritual books and maybe learn something. The idea is a bit small, but I wanted to learn new things and improve and I felt like this idea is the best way to do so.

2 Technology Used

- $\bullet \ \ BootStrapMade$
- Cypress
- Visual Studio 2010
- DataTables

I will first talk on the technologies I used and why I used them.

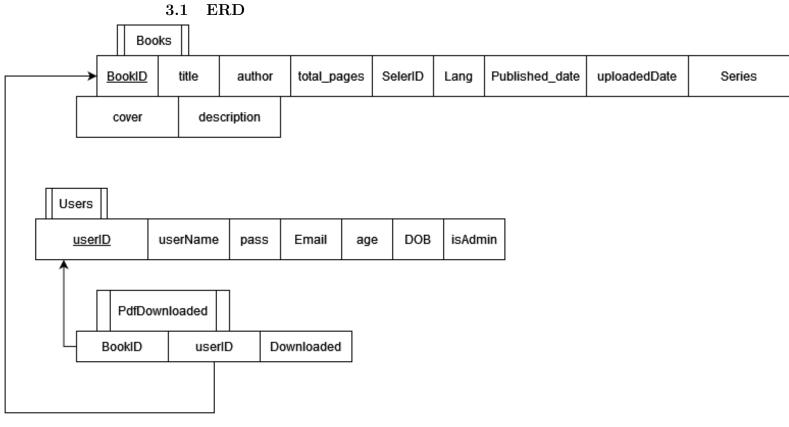

Of course this Project uses Asp.Net as its a main requirement, however I wanted to create a I used for the website templates BootStrapMade which used Bootstrap and JQuery to create beautiful Responsive Pages.

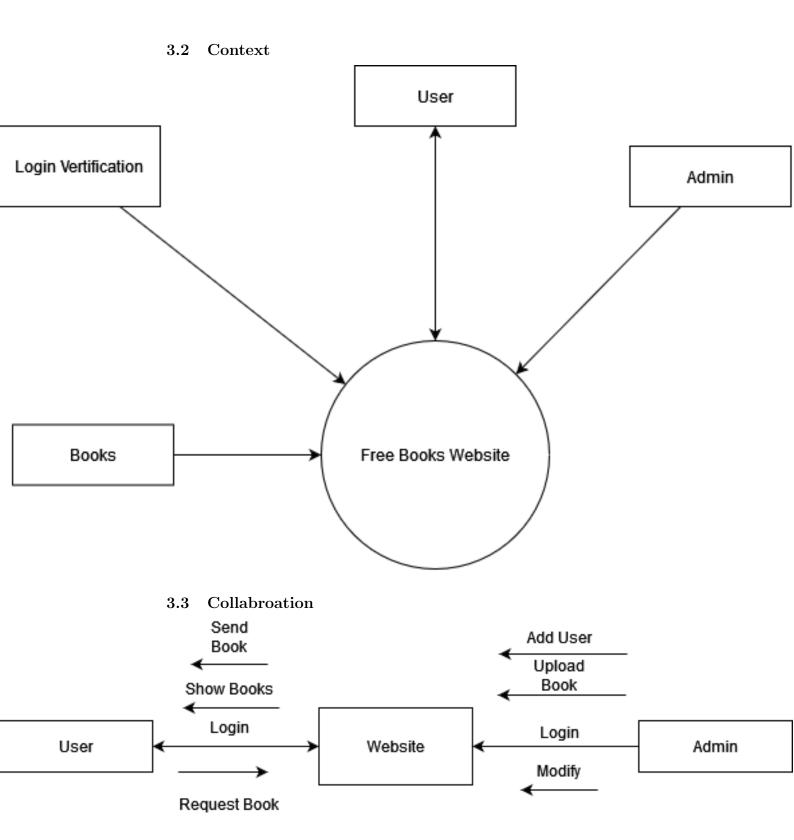

I used cypress to test out the pages End to End, meaning it will open the page and simulate user behavior, which was a big help in the project and I believe it was instrumental in helping me finish the project on time.

I used JQuery and DataTables to create beautiful DataTables, and ease the load off the backend as ASP isnt the "latest" anything anymore.

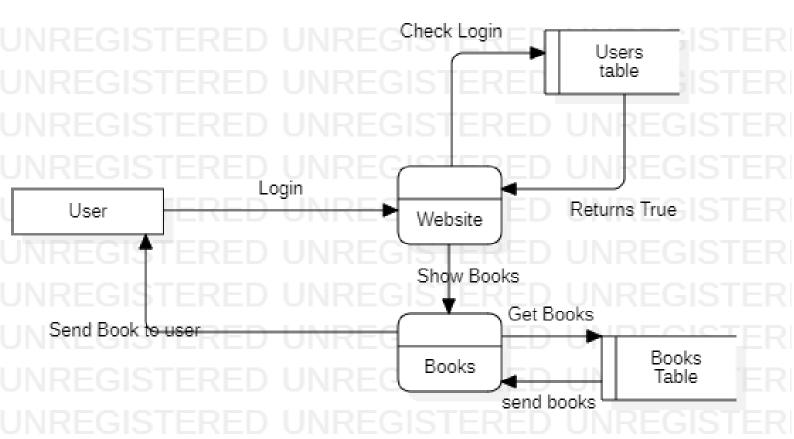

3 Diagrams

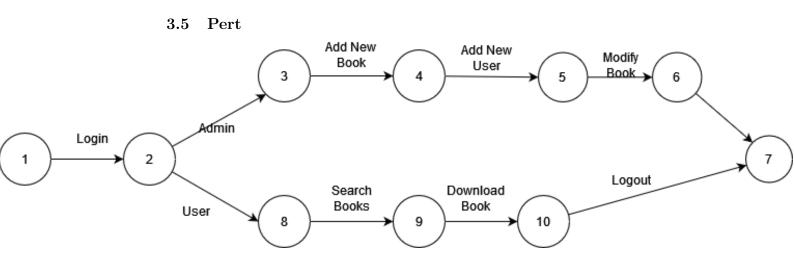

3.4 DFD

3.6 Gant

1	Get Templates, css and Jquery					
2	Create Master Page					
3	Create DataBase					
4	Implement Login					
5	Implement Register					
6	Use Cypress to test them					
7	Implement Books Display					
8	Implement Search					
9	Test Books and Search					
10	Implement Custom admin GridViews					
11	Create EditTemplate and Footer					
12	Test the admin dashboard					

3.7 Class

	-	_	_
	c	_	r

UserID: Int

UserName: String

Email: String

PassWord: String

UserType: Bool

Login(username,pass)

DownloadBook()

GetUser(userID)

PDFLogs

BookID: Int

userID: Int

Downloaded : Date

GetLogs()

getLogsByUserID(ID)

Book

BookID: Int

title: String

author: String

total_pages: int

SelerID: Int

0010110 : 1111

publish_date : Date

uploadedDate: Date

series: String

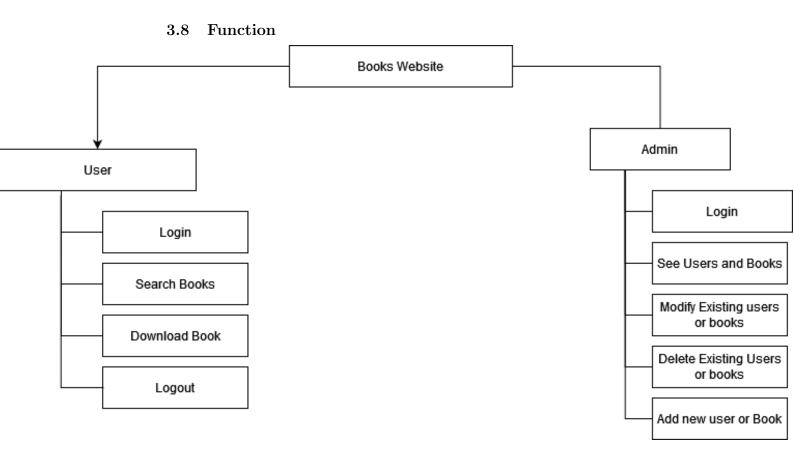

Cover: String

description: String

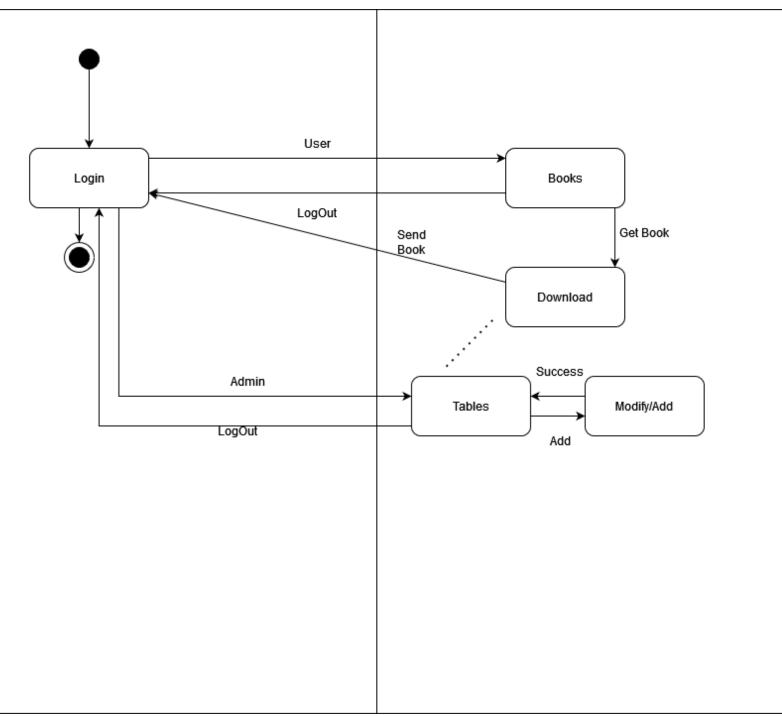

isApproved: Int

Upload Book()

GetBook(bookID)

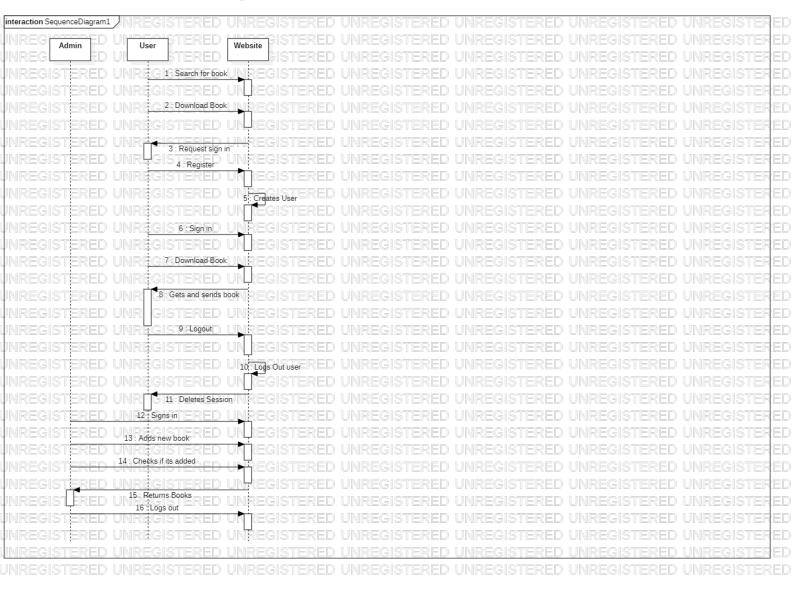

3.9 State

3.10 Schema

3.11 Sequence

3.12 Use Case
